CASE HISTORY:- Chapmans Way - Tunbridge Wells

CONTRACTOR: Verdant Solutions
GABION DESIGN and SUPPLY: Hy-Ten Gabion Solutions

This Site of Special Scientific Interest had suffered a major slippage in 2010 when a third of the 100m bank slid down on to the roadway on the industrial estate. Remedial work was required to both retain the bank and to reinstate the shrubbery that had grown up over many years.

A gabion retaining wall was designed to retain this sensitive area of natural habitat and was built onto a stepped concrete foundation in order to minimise impact caused by excessive excavation. Drainage was incorporated into the design to prevent any further slip caused by excessive water build up.

The Hy-Ten Gabion 700 System was used. This system incorporates a face and rear of 76.2mm x 76.2mm x 4mm diameter welded wire mesh, with the body of the unit in 3mm diameter welded wire mesh. All mesh is coated with triple life corrosion protection.

If you would like Hy-Ten to design and supply gabions and land reinforcement products for you, please contact Steve Lisle or Greer Charlton on **01902 712200**.
